Green: evaluated offline in this study on 30 scenarios. Grey: specified for deployment, not field-tested.
1 Alert on a network flow
IDS or flow sensor
2 Attack probability (MLS) and predicted category
HGB on FIT, isotonic map on CAL; category classifier, no true label
3 Service linkage
flow → asset → service (asset inventory or CMDB)
4 BIA record of the service
AC, BI, RTO, RPO: BIA register; HI: incident log
5 Weighted score (DPS)
AHP weights approved before use; severity of predicted category
6 Priority level
cut-offs fixed in advance, or locked after tuning
7 Human decision and action
analyst approves or overrides; reason logged; playbook
